Sidekick Wanted: High-Ability Kids and the Friendships They Want/Need

With Emily Kircher-Morris

Social relationships for high-ability children and teens can sometimes be difficult to manage. Emotional intensity and advanced cognitive development can make it hard for some kids to develop the deep and meaningful peer relationships that they desire, leaving them feeling frustrated and lonely. What are the causes of this disconnect? How can parents support and coach their child through these stages? Does bullying impact high-potential learners more than other children? You'll leave this session with ideas to support the social connection of your child or teen.

Emily Kircher-Morris, LPC, is the host of The Neurodiversity Podcast, which explores the psychological, educational, and social needs for enriching the lives of neurodivergent people. She is the author of several books for parents and educators related to the development of children and teens who are neurodivergent and cognitively gifted. Her private practice outside of St. Louis, Missouri specializes in mental health support for neurodivergent kids, teens, and their families.
